

E-Wallet System

Signup 2 user id (consider abc and xyz)

Login 1 user id (consider abc)

After login you have to add and show money (consider 1000rs) in ID abc

Distribute amount to second user ID(xyz) .
Receiver ID should be valid

First create 2 user id and then transfer money from one user id to another.

Second, when you will enter receiver id while transferring, it will display full name of that userID.

third, login using sender id and display the history.

Sender Id

Receiver ID(xyz) (When you will enter this Id , it should show full name of that user ID below)

Amount to be transferred (amount should not more than existing amount, else it will show some error)

Add (button)

After login while transferring

After completing these wallet transaction there should be transaction history in sender ID (abc).

It should contain receiver Id(xyz), date, time, sent amount and remaining amount in user ID abc.
